

Help prevent patient harm with Omnicell Opioid Mitigation

Omnicell is empowering pharmacists to play a pivotal role in the opioid crisis. The Omnicell Opioid Mitigation module—part of our Patient Engagement platform—helps you take action to prevent, monitor, and manage opioid abuse and misuse.

Approximately 33% of those being prescribed pain medications are unaware they're taking highly addictive opioids.¹ The Omnicell Opioid Mitigation solution identifies pharmacy patients who are at high risk for opioid overdose and supports naloxone codispensing to improve patient safety.

- Employs a predictive algorithm to identify patients at highest risk for prescription opioid abuse and misuse
- Creates tasks in the pharmacy workflow, prompting interventions to help improve therapy, including prescribing naloxone
- Provides simple, conversational scripting to ease initiation of a sensitive, stigma-free discussion with patients focusing on safety related to opioid use

¹ National Survey on Drug Attitudes, National Safety Council. 2017.

Reduce opioid-related morbidity, mortality, and costs

Bidirectional data flow between the Omnicell Patient Engagement platform and pharmacy management system (PMS) enables application of a predictive algorithm to identify patients at high risk of opioid overdose and ensure they receive education to encourage safe and appropriate medication use.

- Improves safety by prompting naloxone prescription for those at risk for overdose
- Saves time by automating process for identifying at-risk patients
- Reduces stress by providing tactful scripted conversation about naloxone
